HEARTWORM PREVENTIVE comparison chart

Medications used to prevent heartworm infections are called preventives. Preventives kill the heartworm larvae before they have a chance to grow and mature into adult heartworms.

<https://www.drsofostersmith.com/general.cfm?gid=1299>

A number of heartworm preventives are available to pet owners today. Some heartworm preventives contain additional ingredients that will control other parasites, such as roundworms or hookworms. A monthly preventive should be given to all pets. Remember that mosquitoes can get indoors, so even though your pet may not go outside, he is still susceptible.

Product	Minimum Age/Weight	Dose Given	Active Ingredient Against Heartworm	Additional Ingredients	Also Effective Against
<u>Heartgard® Plus for Dogs</u>	6 wks	Monthly; oral	Ivermectin	Pyrantel pamoate	Roundworms and hookworms
